

What is 4G LTE?

4G LTE is the most advanced wireless mobile data network in the world. It is the next generation of mobile communications that allows for superfast download speeds on LTE compatible mobile devices.

Will my existing mobile device work on the LIME Superfast 4G LTE network?

Yes, your existing device will work on our network. But, if you want to take advantage of the new speeds offered by Superfast 4G LTE you will need an LTE compatible device and LTE SIM card.

How is LIME's Superfast 4G LTE network different?

LIME's Superfast 4G LTE network uses the North American standard 700MHz band, the same band used by AT&T and Verizon in the US. It's compatible with the majority of US handset standards. We're also the only network in the Cayman Islands to have 100% coverage - indoors, outdoors and wherever you are on the islands.
